## PRESIDENT'S MESSAGE

# Discrimination Against ABEM Diplomats

Larry D. Weiss, MD JD FAAEM

The article by Tony Scialdone, MD FAAEM, in this issue of *Common Sense*, "About Going Quietly into the Night," describes repeated job discrimination experienced by a diplomat of the American Board of Emergency Medicine (ABEM). Dr. Scialdone became board certified through the ABEM practice track. He chronicled a long career during which he experienced discrimination by prospective employers who limited their job offers to residency trained emergency physicians.

Similar to other medical specialties in their early years, the "grandfather track" allowed physicians to take the board examinations after practicing a certain number of hours or years. In the case of emergency medicine, ABEM offered a seat at the written board examination to emergency physicians who practiced 8,000 hours in emergency departments by the end of 1988. Even though AAEM always believed in strong advocacy for residency training in emergency medicine, we consistently honored the founders of our specialty and always recognized the equal value of ABEM board eligibility, whether by residency training or the initial practice track.

Indeed, in 2001 our board of directors issued a position statement titled "AAEM Non-Discrimination Position Statement on Practice Track vs. Residency Trained EM Physicians." In this statement, our board unequivocally stated "that board certification through ABEM or AOBEM is recognized as the standard that establishes competence in . . . emergency medicine." Furthermore, the statement continues, "restriction of employment . . . based upon a requirement of prior emergency medicine residency training is improper." The statement concludes by adding "currently and for the future, residency training is the only acceptable pathway to ABEM/AOBEM certification." You may easily locate the entire text of this position statement on our website.

This position statement serves as a foundation for our job bank policies. We do not publish advertisements that limit physician opportunities to residency trained emergency physicians. We prefer to only list job opportunities for ABEM certified or eligible physicians. Please inform our home office if you notice an improper offer in our job bank. I imagine our screening procedures are not perfect.

Of course, there are at least two sides to any issue. I recently spoke with leaders of some emergency medicine contract groups and hospital administrators who prefer residency trained emergency physicians. These individuals feel they have a more academically sound position than AAEM. One CEO of a large group mentioned the BCEM physicians who aggressively assert their "board certification." Of course, this has caused some confusion of terms. Therefore, some people in our specialty

## EDITOR'S LETTER

by David Kramer, MD FAAEM

Numbers Count. I know this seems self-evident, but I'm not talking literally here. I'm referring to the number of members in our organization. Take a look at the common themes in many of the recent articles in *Common Sense*. In one form or another, many are basically membership drives. You might be asking, "Why do we do this?" After all, isn't this a bit like preaching to the choir? Sure it is. *Common Sense* is sent to those who are already members. But when you sit back and think about it, you realize that you, our members, are our

mouthpiece. We need you to talk with those who are not yet members, those who have not yet seen the light. You are our best advertising venue. Many of the articles in *Common Sense* tout our diverse accomplishments both for our members and for emergency medicine in general. Look upon this as prime fodder for your own persuasive oratory. Use this information to spread the word to those who have yet to be enlightened. Size does matter when it comes to an organization, and there is strength in numbers. So get out there and get the word out. Numbers count.

**FAAEM**

*average means board certified*

### AAEM Mission Statement

The American Academy of Emergency Medicine (AAEM) is the specialty society of emergency medicine. AAEM is a democratic organization committed to the following principles:

1. Every individual should have unencumbered access to quality emergency care provided by a specialist in emergency medicine.
2. The practice of emergency medicine is best conducted by a specialist in emergency medicine.
3. A specialist in emergency medicine is a physician who has achieved, through personal dedication and sacrifice, certification by either the American Board of Emergency Medicine (ABEM) or the American Osteopathic Board of Emergency Medicine (AOBEM).
4. The personal and professional welfare of the individual specialist in emergency medicine is a primary concern to the AAEM.
5. The Academy supports fair and equitable practice environments necessary to allow the specialist in emergency medicine to deliver the highest quality of patient care. Such an environment includes provisions for due process and the absence of restrictive covenants.
6. The Academy supports residency programs and graduate medical education, which are essential to the continued enrichment of emergency medicine, and to ensure a high quality of care for the patients.
7. The Academy is committed to providing affordable high quality continuing medical education in emergency medicine for its members.

### Membership Information

Fellow and Full Voting Member: \$365 (Must be ABEM or AOBEM certified in EM or Pediatric EM)

\*Associate Member: \$250 (Associate-voting status)

Emeritus Member: \$250 (Must be 65 years old and a full voting member in good standing for 3 years)

Affiliate Member: \$365 (Non-voting status; must have been, but are no longer ABEM or AOBEM certified in EM)

International Member: \$125 (Non-voting status)

AAEM/RSA Member: \$50 (voting in AAEM/RSA elections only)

Student Member: \$50 (voting in AAEM/RSA elections only)

\*Associate membership is limited to graduates of an ACGME or AOA approved Emergency Medicine Program.

Send check or money order to : AAEM, 555 East Wells Street, Suite 1100, Milwaukee, WI 53202, Tel: (800) 884-2236, Fax (414) 276-3349, Email: [info@aaem.org](mailto:info@aaem.org). AAEM is a non-profit, professional organization. Our mailing list is private.

How are you practicing Emergency Medicine without it?

# About Going Quietly into the Night

Tony Scialdone, MD FAAEM

I just finished reading Mr. Caleb Trent's article entitled "Career Opportunities in Emergency Medicine" in the January/February edition of *Common Sense*. His article begins with the words "So you want to be an emergency physician?" Well, Mr. Trent, yes! I want to be an emergency physician.

I began practice in 1981. At that time, residency programs in emergency medicine were quite rare, and many medical students and residents were not aware that these programs existed. The first EM resident began a training program in 1970, and the first academic departments in EM were established the following year. In 1973, a provisional sectional council was established in the AMA House of Delegates and became permanent in 1975. The American Board of Emergency Medicine (ABEM) was established in 1976, and emergency medicine was recognized by the American Board of Medical Specialties (ABMS) in 1979, although it was given only conjoint status at that time. The first board exam was administered by ABEM in 1980. In 1988, the practice track for certification was closed. Emergency medicine would not exist as a primary board recognized by the ABMS until 1989.

After having graduated from the University of Maryland School of Medicine in 1979 and then completing 2+ years of a general surgery residency in Pittsburgh, PA, I was still unaware there were institutions offering postgraduate training in emergency medicine. I performed 10,000 hours of emergency medicine practice between 1982 and 1987, loving every moment (well, a great majority of the moments anyway). I sat for my written and oral boards in 1988, the last year access to board certification was allowed via the practice track. I have been ABEM certified for twenty years. This year marks my twenty-sixth year of practice, and I have fifteen years experience as an ED director and department chair. I was cofounder of an AOA approved emergency medicine residency in 1991 and was integrally involved with the day to day education of residents for close to ten years. I found those years to be the richest and most gratifying of my career.

And herein lies the rub. As residency programs have proliferated and practice based board certified physi-

cians leave our specialty, opportunities for practice track physicians are rapidly dwindling. Despite my qualifications, experience, ABEM certification and the fact that I am nine months away from a Masters degree in Medical Management from Carnegie Mellon University, I cannot compete for employment commensurate with my skills, experience and board certification.

Check the classified ads. Many employers are requiring residency training as a condition of employment. EM residency graduates without certification or experience are eligible for employment, but ABEM and AOBEM certified physicians with over twenty years of experience are not. This position is taken by academic institutions down to low volume community hospitals. Thousands of residents trained by practice track physicians can obtain employment in places where their mentors are not considered.

I am fifty-four years of age. I am not ready to go quietly into the night. I am a highly skilled, motivated, literature-current EM physician with excellent teaching skills. I still have many goals I would like to accomplish, including contributions to patient care and medical education. Am I, and those with whom I share this bond, to be disenfranchised because, by accident of birth, our careers predate the recognition of emergency medicine as a primary specialty? Do I and my kindred EM physicians really have nothing of value to contribute to our chosen specialty?

An entire generation of EM physicians is being driven to the sidelines. ABEM has not tracked which boarded physicians are residency trained versus practice track prior to 1995. AOBEM has never tracked this information. Conversations with the executive director of ABEM indicate that a "significant" number of ABEM boarded physicians achieved their status via the practice track. I urge the Academy and this specialty to support these physicians. The Academy did take a stance with the AAEM Non-Discrimination Position Statement of 2001. More is needed. Do not allow the skill, wisdom and passion of these physicians to pass away prematurely.

*President's Message - continued from page 1*

place a higher value on residency training than the now vague designation of "board certification in emergency medicine." We cannot expect hospital administrators to understand the nuances of our professional issues. Often, hospitals feel they take the high road when they insist on residency trained emergency physicians.

Unfortunately, the laws of our country only prohibit certain types of discrimination. Hospitals and physician groups do not break any laws when they advertise for residency trained emergency physicians. This issue will disappear over the next 10-15 years as the original

practice track physicians retire. In the meantime, AAEM will continue its current policies and advocate for all ABEM and AOBEM eligible and certified emergency physicians. I believe that those who prefer to hire only residency trained emergency physicians have good intentions and believe they are doing the right thing. However, they should have the ability to recognize the equivalent credentials of ABEM practice track diplomats and find a place for them in their emergency departments.

# My Cleaning Lady and the Practice of Medicine

Howard Blumstein, MD FAAEM  
Vice President, AAEM

*(Note: essays about the convoluted relationship between some contract groups and physicians are dull and seldomly read. I offer this alternative contrast for those who still ask, "What's this all about?")*

I contracted to purchase my house when it was only framed up. I was able to change the floor layout, add details and choose all the interior design features. When it was built, my mother sat me down for one of her famous talks. "Now Howard," she began, telling me that it was a beautiful house, but I really needed to hire a cleaning service to attend to the cleaning needs of the house to which I am not generally attentive. She was right.

So I called a cleaning service. The manager came to my house. We discussed what they would do and settled on a price. The manager encouraged me to call if I am not satisfied with the work performed. I have the right to cancel the contract if I am not satisfied. Nobody would debate that the relationship between home owner and cleaning service should be any different. The home owner is purchasing a service and ultimately has control over the continuation of that contract.

In a variety of forums, representatives of certain contract management groups (CMGs) have expressed the position that many doctors don't want to be bothered with the mundane details of running a practice. The CMGs, therefore, are simply providing a service for which those doctors (not just emergency physicians) are willing to pay. Just like I am willing to pay for cleaning services. It sounds so benign.

But the comparison does not hold up to closer scrutiny. Many of the CMGs that do not adhere to AAEM's principles (see the AAEM Vision Statement) control who works in the emergency departments. They do the hiring and firing. That would be akin to my cleaning lady choosing who gets to live in my house. Physicians do not

have the right to change managerial service providers if they are unhappy. Imagine me being unable to change cleaning services, even if I am unhappy with the work they are doing. Many CMGs siphon off a portion of the emergency doctor's professional fees, they determine what part of those fees to take without consulting the physician, and at times have gone to great lengths to hide those figures. Who would hire a cleaning service that took your paycheck, removed a secret portion and then gave you the rest?

OK, so the relationship between a medical group and a service provider is necessarily more complex, but the same basic principles apply. The group, not the provider, should determine who is and is not part of the medical group. Within the limits of their contracts, the group should have the right to change service providers, negotiate service fees, request competitive bids and determine what services they want. That seems simple enough.

One of the basic principles of AAEM is that physicians should be in control of their practices. If they choose to hire outside help for some or all of the mundane tasks of running the business side of medicine, then so be it. But obtaining such assistance shouldn't mean ceding control of their practice. Yet this is exactly what happens when an unscrupulous CMG is in control of an ED.

This essay is intended, primarily, for young physicians who seem to be most vulnerable to the platitudes of those CMGs which do not adhere to AAEM's principles. To those who would be lulled by the Siren call of such groups, beware. Ask the hard questions; find out who is really in charge. Will you make the major practice decisions? When a conflict occurs, who will decide who stays and who goes? Who is steering the boat, you or the cleaning lady? Odysseus tied himself to the mast of the Odyssey to resist the Sirens. What will you do to insure that you control your career?

Since 2001, the CDC has played an increasing role in terrorism response and planning efforts with regard to radiological or nuclear events. We have identified, through audience research, significant gaps in knowledge and skills among clinicians regarding their ability to respond to a radiological emergency, particularly one related to terrorism and involving mass casualties. This is a critical need since clinicians in hospital emergency departments would serve as the first receivers of casualties, and other clinicians would present to the emergency department in order to assist. There are numerous issues related to disaster and mass casualty management that are unique to dealing with radiation exposure and contamination, and the CDC understands the need to provide education and information to help clinicians better manage such an event.

The tool kit includes several items that may be useful for emergency services clinicians. To order the Radiological Terrorism: A Tool Kit for Emergency Services Clinicians, just send an e-mail to: [cdcinfo@cdc.gov](mailto:cdcinfo@cdc.gov)

## Upcoming AAEM–Endorsed or AAEM–Sponsored Conferences for 2008 & 2009

AAEM is featuring the following upcoming endorsed, sponsored and recommended conferences and activities for your consideration. For a complete listing of upcoming endorsed conferences and other meetings, please log on to <http://www.aaem.org/education/conferences.php>

# HCAHPS: The Patient's Perspective on Hospital Care

Kathleen Ream, Director of Government Affairs

The first national, standardized survey of patients' perspectives of hospital care, the CAHPS® Hospital Survey (better known as HCAHPS), has now been in the field for over a year, and results for over 2,500 participating hospitals were publicly reported for the first time in late March 2008.

HCAHPS has already caught the attention of many healthcare organizations and hospital administrators and it is quite possible that, armed with survey results for one or more hospitals, patients will soon be soliciting your advice.

The survey asks a random sample of discharged, adult patients across medical conditions about their experience of care (including communication with doctors) and rating of hospital. It was developed by researchers at the Agency for Healthcare Research and Quality and the Centers for Medicare & Medicaid Services, who also oversee survey administration and public reporting.

Participating hospitals (and by 2009 nearly all acute care hospitals will participate, or risk losing significant government payments) must adhere to standardized survey administration protocols and submit to government review. Hospital-level scores will be publicly reported on the Hospital Compare website [www.hospitalcompare.hhs.gov](http://www.hospitalcompare.hhs.gov), alongside the current clinical and mortality measures. Results are adjusted for survey mode (mail, telephone, etc.) and certain patient characteristics (self-reported health status, age, ER admission, etc.) to eliminate sources of potential bias.

The 27 items on the HCAHPS survey can be viewed at <http://www.hcahponline.org/surveyinstrument.aspx>. The official HCAHPS website, [www.hcahponline.org](http://www.hcahponline.org), houses a wealth of information about survey content, development and administration.

## Transfer for Appropriate Medical Treatment

On February 22, 2008, the Kentucky Court of Appeals found that Billie C. Shreve's estate (Appellees) failed to prove that Appellant, Ohio County Hospital Corp. (OCHC), violated EMTALA requirements of appropriate screening and transfer. The appeals court held that the "trial court erred by not granting directed verdicts and dismissing the appellees' EMTALA requirements" (Ohio County Hospital Corp. v. Martin, Ky. Ct. App., No. 2006-CA-002248-MR, 2/22/08).

## The Facts

In June 2002, Billie C. Shreve was injured in an automobile accident. Shreve was transported to OCHC where she was evaluated by an RN and an ED physician. Shreve stated she was uncomfortable, but she did not complain specifically of pain. The nursing staff continued to monitor Shreve, whose condition deteriorated to the point that she lost consciousness.

Determining that Shreve was in shock and likely hemorrhaging, the physician ordered a CT scan to identify the site of hemorrhaging. Shreve received blood transfusions in the interim. When the results of the CT scan were received, the ED physician concluded that Shreve required surgery for internal bleeding from abdominal trauma.

With no surgeons available at OCHC, the doctor arranged for Shreve's transfer to another hospital for surgery. By the time Shreve was delivered to the other facility, she had bled to death. Shreve's estate filed complaints alleging medical negligence and seeking damages for EMTALA violations and for Shreve's husband's alleged loss of consortium. The case was tried in the Ohio Circuit Court where the jury returned a verdict finding OCHC and the doctor liable under EMTALA and for medical negligence. The hospital appealed.

## The Ruling

Regarding appellees' claim of EMTALA screening violations, the Kentucky Court of Appeals noted that hospitals with EDs must provide an appropriate medical screening for any individual who presents requesting examination or treatment for a medical condition. However, the court found that Shreve's estate provided neither evidence of disparate treatment nor of improper motive, and thus the trial court "should have directed a verdict in the hospital's favor on that portion of the appellees' claim."

Turning to the appellees' claim relating to the stabilization requirement, the court found that appellees' argument and the court's instruction to the jury that the patient must be stabilized prior to transfer "were not an accurate statement of the law." Rather, the statute reads that patients with an emergency medical condition "must either be treated or transferred in accordance with EMTALA." Whether OCHC violated EMTALA thus turned on whether the transfer complied with the requirements. The appeals court determined that the ED physician appropriately completed a certification "that based upon the information available at the time of transfer, the medical benefits reasonably expected from the provision of appropriate medical treatment at another medical facility outweighed the increased risks to the individual." "There is no question," wrote the court, "that the hospital complied with the statute. Therefore, the [trial] court erred in not granting a directed verdict on this portion of the appellees' EMTALA claim as well."

Failing to make a *prima facie* case under EMTALA, the appellate court found that the trial court improperly submitted the case to the jury, when it should have been dismissed by directed verdict. However, the Kentucky Court of Appeals determined that the medical negligence claim should be affirmed, but that

### AAEM's Government Relations Resources

Advocacy is more than just understanding the issues. To make a difference, you have to make your voice heard. The involvement of individual emergency physicians is vital to the success of AAEM's grassroots efforts. To assist you in your government relations activities, AAEM provides the following services and information:

#### 1. AAEM E-Mail Alerts

AAEM E-Mail Alerts provide strategic information to affect key policy issues of concern to emergency medicine. To receive future Alerts, sign onto the Action E-List on the homepage of the Legislative Action Center, <http://capwiz.com/aaem/home>.

#### 2. Legislative Action Center

The Legislative Action Center located on AAEM's Web site [www.aaem.org](http://www.aaem.org) is "one-stop shopping" for federal legislative and regulatory information. It contains the important issues that AAEM is tracking for you, recent votes, current bills and other relevant

items. You can search the congressional database by name, state, committee, or leadership, and send messages to your congressional delegation directly from the site.

#### 3. Additional features include:

- "Sponsor Track" which attaches information on relevant bill sponsorship on Members' bio pages;
- A "Vote Scorecard" listing every Member of Congress and how they voted on bills of interest to AAEM;
- "Megavote" provides you with a weekly e-mail on the voting patterns of your Representative and Senators;
- A searchable "Guide on National and Local Media" including newspapers, magazines, and TV networks and stations; users can send e-mails, faxes or printed letters to newspaper journalists, radio talk show hosts and television commentators; and
- Detailed "Campaign Contribution Data."

#### 4. Washington Sentinel

The *Washington Sentinel* is AAEM's e-newsletter on legislative and regulatory issues of concern to emergency medicine. You can receive the *Washington Sentinel* as a downloadable PDF document by sending an e-mail note to [aaemgov@aol.com](mailto:aaemgov@aol.com).

## Certificate of Excellence in Emergency Department Workplace Fairness

The American Academy of Emergency Medicine strongly supports fair working practices for emergency physicians. Consequently, it will certify excellence in the ED workplace if ED physician employees are guaranteed the following five workplace conditions:

- A reasonable due process policy.
- A reasonable policy of financial transparency that protects physicians against financial exploitation.
- A reasonable policy of financial equity that allows physicians to share in the department's profits.
- A reasonable policy of political equity that allows physicians to improve their own working conditions.
- Employment arrangements that do not impose post-contractual restrictions.

The Academy recognizes the existence of many different emergency department business models. The following examples are provided as guidelines that comply with the principles outlined above. These guidelines are not absolute, but reflect the spirit of fairness encouraged by the Academy. Thus, any group that believes it meets conditions for fairness is encouraged to submit an application for a certificate of excellence. Applications will be reviewed by the Academy. Departments that are deemed to fall outside fairness criteria will be provided direct feedback and given ample opportunity to reapply. Emergency physicians are encouraged to contact AAEM (anonymously, if desired) to report a listed group that they believe is not in compliance, along with an explanation.

Principle	Examples of fair employment practices
Due process	Unilateral termination without cause and without rights defined in the medical staff bylaws is acceptable only during a provisional period of employment, not to exceed one year. Termination with cause requires a fair hearing upon request of the terminated physician.
Financial transparency	Partners are automatically provided information on total group charges, collections, management, and operational expenses, and other group income distribution on at least a quarterly basis.
Financial equity	For democratic groups, full partnership opportunities are available through a predefined process that does not exceed three years. Share distribution among partners is transparent.
Political equity	Governance procedures are published, with processes for election of leadership and partners, appointment of medical directors and administrators, and bylaws amendments.
Political equity	Practicing physicians must make all practice decisions (including those involving hiring, firing, staffing levels, and clinical processes) and have a primary fiduciary responsibility to their patients, not to a corporate entity or shareholders. No layperson (defined as a non-physician or non-practicing physician) can have a commercial interest in the practice or the right to control the professional judgment of any practicing physician. No layperson may be a corporate officer or director or occupy a position of similar control. Physician employment by hospitals or non-profit entities is permissible when in accordance with state law.
No post-contractual restrictions	Non-compete or similar clauses that affect where a physician may work upon leaving the group or upon group turnover are not conditions of employment.

## RESIDENT PRESIDENT'S MESSAGE

*Andrew T. Pickens, IV, MD JD MBA  
President, AAEM/RSA*

First, I want to say it has been a pleasure and an honor serving as RSA President over the last year. As I have made clear in most of my previous President's Messages, I believe that advocacy on behalf of those in our profession is vital to the health of our profession. AAEM/RSA has provided me with education and insight into many of the critical issues facing our profession. With this last message, I want to give thanks to many of the people who make this possible.

I have been the beneficiary over the last year of a very active, vibrant board. Fortunately for AAEM/RSA, many of these same individuals will be serving again next year. To each of you, I say thanks, and I look forward to continuing our relationship on the board in my new role as Immediate Past President. To those that are leaving service on the board, thank you for all your help, and I hope you stay involved.

One person I wanted to give a special thanks to is Janet Wilson, Executive Director of AAEM/RSA.

Everyone on the board knows that without Janet, AAEM/RSA would not run as well as it does. She is the organizer, the motivator and the communicator for all of us. I have heard it said that trying to manage physicians is like attempting to herd cats. If this is true, Janet is a great cat herder. Seriously though, Janet is a true professional: level headed, compassionate and reliable with clarity of sight. I think I can speak for the entire board when I say thank you for all that you do.

It has been a great year. Membership is at the highest it has ever been, with significant growth over the past year. We are reaching more residents and students than we ever have before. I know this will continue in the year to come. To the new board, make this year yours. Set goals. Formulate plans to achieve and execute them. But most of all, enjoy the experience, take ownership of your role, and educate yourself. You are the voice of those who elected you. Good luck.

## Adversity

*Sarah Todd, MD MPH  
Vice President, AAEM/RSA*

I expected there would be plenty of challenges in residency. I spent my first year of marriage as the wife of an intern when my husband began his residency in emergency medicine. I had lived with someone who survived residency, and in fact, had survived as the spouse of a resident. I had seen the exhaustion, the lack of energy for the things you love, the sheer frustration that frequently accompanies residency and the neglect of one's body through poor eating habits and lack of exercise. I thought I had a good idea of what I was getting into. What has surprised me are the hard times that I have survived in residency.

I expected the demands of residency to be harder for myself than they were for my husband. The simple explanation for this is named Natalie. She was two and a half when we picked up and moved 11 hours away for my residency. I predicted the normal hardships of residency such as staying awake on the drive home when I was exhausted, the fear of being the one responsible for a very sick patient for the first time, being the recipient of someone else's misplaced frustration, the toll of having to give bad news to a patient or family and the stress of the in-training exam. I anticipated childcare conflicts and the need for backup babysitters when my daughter was sick. I expected that my daughter would beg me to stay home, and this would tug at my heartstrings. She would say "Can't you call your attendings today, and tell them that you need a home day with your daughter?" This had the effect that I was expecting (guilt), but it did not produce the effect that my daughter desired - me staying home. The struggles I anticipated were the easy parts to survive.

October of my intern year, I found myself sitting in the ED on the wrong side of the patient/physician interaction. I called my mom and asked her to come and help, because my husband was sick. I held my daughter as she cried and grabbed for her dad as he was wheeled away for treatment. I had not even contemplated the thought that my husband, at 33 years old, would get sick. As I tried to get in touch with his parents for the next few hours, I sat alone with my two year old, waiting to hear how my husband was doing. I called the chief residents and a few friends and waited until my mom made the four hour drive from her house. My husband did well, but he received a big blow to his psyche. Physically, we all survived this ordeal. My husband is doing great and is back to baseline. The emotional toll it took on our family has taken a lot longer to heal.

Following these events, I took a few days off to stay home and help get things settled. We had family that stayed to help us. This was good as it allowed me to return to my rotation, but I think it slowed the process of dealing with a lot of the emotional fallout from this event. I like to call it my husband's ALTE.

I like to learn from each experience I have, whether it is a patient encounter or a painful experience in life. What I learned from my husband's ALTE is that life continues. It doesn't just stop while I am in residency. If something unexpected happens, be sure to take the time to deal with it. If it is something major and you cannot deal with it and do residency at the same time, then consider taking some time off to deal with the situation. My goal is not just to finish residency, but to finish residency with a healthy and intact self and family.

I was able to put this to the test when my mom fell and hurt herself. She had central cord syndrome and spent a few days in the hospital. This situation was complicated by the fact that my parents run a retail business, and this happened in early December. I was able to spend a week at home and help my mom get settled, and this allowed my dad to keep running the business. I did all of the usual non-medical helper things: I drove her to PT/OT, and I helped set up the house so that she could function better. I had to have friends pick up some of my shifts and rely on my colleagues for help - hard to do in the world of emergency medicine where we don't call in sick for a shift. But, it was the best thing I could have done. I got to stay home and help. Not only did I help while she was in the hospital, interpreting the doctor speak for both of my parents, but I had the time to set things up so she could function well at home. And when I left, I felt comfortable that she would be ok. This would not have happened if I were not able to spend time at home with her.

Life continues to happen; it does not stop for residency. One makes many sacrifices to be a doctor. There are weddings, births, family reunions, breakfasts, dinners with family and birthday parties that are missed due to clinical responsibility. There are unexpected joys, challenges, calamities and disasters that occur in residency. It is important to remember not to stop living while training! You don't want to find three or four years removed from your life at the end of your residency. If time is needed to deal with a disaster, take it. You will be in a better place when you finish your training if you have taken care of yourself and your loved ones.

I am close to finishing residency; I can see the light at the end of the tunnel. I am excited to be finishing, but I am also thrilled that I am finishing and still very connected to my family. I am happy to report that all of my family is doing quite well. I am proud of my accomplishments both personally and professionally. I look forward to getting to spend a little more time being a wife and a mother in my new job.

## RSA Education Committee Update

*Michael Pulia, MD*

*Education Chief Resident, University of Illinois at Chicago*

*AAEM/RSA Board of Directors and AAEM/RSA Education Committee Chair*

Sitting at the French Quarter's famous Café du Monde enjoying café au lait and beignets, I started to reflect on the recent activities and successes of the AAEM/RSA Education Committee. The month of February was particularly productive for the committee. On Leap Day 2008 it was my honor to represent RSA in New Orleans at the Council of EM Residency Directors Academic Assembly (CORD-AA). During the presentation entitled "Leadership in Residency," Dr. Schmitz (Immediate Past EMRA Academic Affairs Rep.) invited me to discuss the various leadership opportunities within RSA and my experiences as the Education Committee Chair. Afterwards, several residents approached me to express an interest in taking active roles within AAEM/RSA. This will certainly strengthen the organization as the residents in attendance are an accomplished and motivated group who will undoubtedly be future leaders in EM education and research.

For those of you not in attendance and considering a career in academics, I would strongly encourage you to attend the CORD-AA next year. This meeting brings together accomplished educators in EM, and each lecturer provides invaluable advice. The resident track covered a variety of interesting topics including building a CV, EM burnout, fellowships and transitioning to junior faculty. The quality of speakers was second to none, and I congratulate Dr. Schmitz for organizing such an impressive event. The overarching themes that emerged from the track can be summarized in two words: passion and balance. By finding an area of passion within EM, you can effectively carve out a niche and turn personal satisfaction into professional success. Then, by maintaining a balance between professional responsibility and personal life, you can avoid burnout and ensure longevity in EM.

After the didactic sessions, conference attendees took to the streets of the Big Easy to enjoy one of America's most unique cities. Networking opportunities abounded as residents dined and enjoyed live music alongside the leaders of EM. Life in the French Quarter certainly seems to have returned to pre-Katrina status. However, my ride from the airport turned into an impromptu "Katrina" tour and was a harsh reminder that many parts of the city remain in ruins and much work remains to be done. As usual, the people of New Orleans were amazing hosts. EM should continue to support them by holding future national meetings there and continuing to advocate for the rebuilding process.

In addition to the CORD-AA, this February also marked AAEM's 14th Annual Scientific Assembly (SA). The Amelia Island Plantation was a beautiful setting for the conference, and it provided a very intimate feel for the event. The resident track at SA is the Education Committee's premier event and was the focus of a tremendous planning effort by its members. The content of the resident track was geared towards members of both RSA and the Young Physicians Section (YPS).

Dr. Sean Trivedi, an accomplished fund manager prior to pursuing a career in EM, opened the track with a step by step guide to developing a personal financial plan. His well attended talk contained information about the importance of asset protection and the power of compound interest. The talk definitely piqued interest as numerous attendees followed him into the hallway afterwards with further questions.

Next up to the podium was Dr. Mark Reiter, former RSA President and AAEM board of directors member, who discussed how to effectively locate and evaluate EM jobs. Throughout the presentation he applied the AAEM principles of workplace fairness and transparent billing to real life scenarios encountered when considering various employment settings. Also, his list of 'job red flags' will certainly help some of our members avoid signing a contract they will later regret. Graduating residents in attendance found the information to be especially timely and helpful with the job finding season at its peak.

Dr. Carey Chisholm, University of Indiana EM Residency Director, wrapped things up with a talk on transitioning to life after residency. The talk covered everything from finishing strong in residency to blending in at your new job. Speaking from years of experience, he provided words of wisdom and reflections on how to shape a rewarding career. Again, the importance of developing a niche and finding balance in life were echoed by a leader in EM. On behalf of the Education Committee, I would like to extend our deepest gratitude to these speakers for volunteering their time in the name of educating the RSA membership.

After a long day of lectures, it was time to unwind, and the RSA social event that night was the perfect venue. The poolside Hawaiian luau themed party sponsored by Pepid provided a chance to catch up with old friends and to meet fellow EM residents from around

## The First Year as a Community Emergency Physician: Reflections and Advice

Brian Potts, MD MBA  
Immediate Past President, AAEM/RSA

*After eight months, I've had some time to reflect on my transition from residency to practice as an attending. For some background, I accepted a job with a private, democratic group staffing two community emergency departments. The majority of residents that graduate from an emergency medicine program will work in the community following residency. Although I can't speak for all recent graduates, most will share some common experiences regardless of where we take our first job. Here are some personal reflections and advice, in no particular order, that I have for those residents about to start their first job.....*

- **Your Training....** You've just graduated from a great residency training program, and you are definitely ready to practice on your own. Be confident in your skills and knowledge, but also don't hesitate to ask for help when you need it. Smile when you find yourself sometimes thinking, "What would Dr. (insert your faculty member here) have done with this patient?"
- **The Transition....** Being an attending is much better than being a resident. Enjoy the transition. In the beginning, you might feel that you are a bit slower than others and occasionally confused about who to call, protocols to follow, where supplies are located, etc., but keep in mind that all these bits of operational knowledge will come with time. With a month or two under your belt, you'll hit your stride.
- **Education....** You will continue to learn something new every day from your emergency colleagues and consultants in the community, but it's different than residency. Your "life-long learning" will be more self-directed going forward.
- **Work and Pay....** The patient care process in the community moves faster and more efficiently than most academic centers. There are fewer frustrating delays and roadblocks, which is quite nice. On the other hand, when comparing the average hour of work in residency to the average hour of work in the community, you will probably find yourself working harder during your community shifts. Remember though, you aren't getting paid like you were in residency. When you hold that first paycheck in your hand, you'll understand how good it feels.
- **Teamwork....** Remember that the ED functions as a team. When you enjoy working with your staff, they enjoy working with you. Be especially nice and respectful to your nurses. They will make or break you, so you want them on your side. Bring some food such as coffee and bagels for the staff during some of your shifts. Just a little something extra to thank them for helping you each day.
- **Don't be Late...** Arrive ten minutes early for each shift. Your colleagues will appreciate it, and you can start off your shift relaxed and not stressed from rushing through traffic. I'll admit it - I wasn't the best resident when it came to arriving on time. In the real world, you can't be late.
- **Consultants...** From day one, make an attempt to get to know your consultants and medical staff at your hospital. It will help in the future when you are in a bind at 3:00AM and need help for that patient you have in the ED.
- **Patient Satisfaction...** Although we know it's important, we probably didn't think about it as much during residency. You will find yourself hearing about patient satisfaction and Press Ganey scores more than you can believe. Hospital administration focuses on this every day, so it will be very important to every emergency department medical director, to the emergency group's contract stability and to you. Be nice to your patients even if they aren't nice to you. Apologize for their long wait in the waiting room or delays in care. It takes two seconds but makes a big difference.
- **Documentation...** Listen to your faculty whenever you have lectures or discussions about documentation and billing during residency. You will have a head-start compared to most new graduates learning the complexities of documenting to maximize the quality of your charts for reimbursement/billing and from a medico-legal standpoint. You can only bill for what you on chart, and you can only defend what you document.
- **Balance...** Life is good. You will have much more outside free time than you were accustomed to over the last 7-8 years during medical school and residency. Take advantage of this, and spend time on other pursuits/hobbies and with your friends and family. Plan that trip you've wanted to take for the last two years.
- **Before you graduate, make sure to thank all the faculty, nurses and staff in your residency program. Their work helped you get through residency just as much as your personal efforts did.**

## Resident Journal Review: May - June 2008

*Daniel Nishijima, MD; David Wallace, MD MPH; Christopher Doty, MD and Amal Mattu, MD*

*This is a continuing column providing a brief look at journal articles pertinent to EM residents. It is not meant to be an extensive review of the articles, nor is it wholly comprehensive of all the literature published. Rather, it is a short list of potentially useful literature that the busy EM resident may have missed. Residents should read the articles themselves to draw their own conclusions. This edition will include articles published over a two month period, February through March 2008.*

### **Bobrow BJ, Clark LL, Ewy GA, et al. Minimally interrupted cardiac resuscitation by emergency medical services for out-of-hospital cardiac arrest. JAMA 2008; 299 (10):1158-1165.**

This prospective study based in Arizona evaluated Minimally Interrupted Cardiac Resuscitation (MICR) done by EMS personnel in the pre-hospital setting versus standard care. The main outcome measure was survival to hospital discharge.

MICR consisted of an initial series of 200 uninterrupted chest compressions, rhythm analysis with a single shock, 200 immediate post-shock chest compressions before pulse check or rhythm reanalysis, early administration of epinephrine and delayed endotracheal intubation.

The first analysis the authors looked at was the difference before and after MICR training. Survival to hospital discharge increased from 1.8% (4/218 patients) before MICR training to 5.4% (36/668 patients) after MICR training with an odds ratio of 3.0 (95% CI 1.1-8.9). In the second analysis, authors evaluated MICR protocol compliance looking at patients that received MICR and those who did not. Survival to hospital discharge was significantly better among patients who received MICR (9.1%, 60/661 patients) than those who did not (3.8%, 69/1799 patients), with an odds ratio of 2.7 (95% CI 1.9-4.1). Results were even more impressive in the subgroup of patients with witnessed ventricular fibrillation in both analyses.

Authors concluded that survival to hospital discharge of patients with out-of-hospital cardiac arrest increased after implementation of MICR as an alternative to standard EMS protocol. This is a well-done and impressive study on a subject that is traditionally difficult to study. It reinforces the importance of uninterrupted chest compressions in cardiac arrest.

### **Russell JA, Walley KR, Singer J, Gordon AC, Hebert PC, Cooper DJ, et al. Vasopressin versus norepinephrine infusion in patients with septic shock. N Engl J Med. 2008 Feb 28;358(9):877-87.**

This multicenter, randomized, double-blind trial looked at the use of the addition of low-dose vasopressin (0.01

to 0.03 U per minute) or norepinephrine (5 – 15 mcg per minute) in patients with septic shock already receiving open-label vasopressor agents. A total of 396 patients received vasopressin and 382 patients received norepinephrine. Patient characteristics were well matched.

The results of the primary outcome measure of 28-day mortality rates showed no significant difference between the vasopressin and norepinephrine group (35.4% and 39.3% respectively; p=0.26). There were also no significant differences in the overall rates of serious adverse events between the two groups (10.3% and 10.5%).

This study concluded that low-dose vasopressin did not reduce mortality rates as compared with norepinephrine in patients with septic shock who were already being treated with catecholamine vasopressors. It should be noted that the mean time of study entry to infusion of the drug was 12 hours, which may have placed patients outside the window of beneficial effects.

### **Walsh P, Caldwell J, McQuillan KK, et al. Comparison of nebulized epinephrine to albuterol in bronchiolitis. Acad Emerg Med 2008; 15:305-313.**

In this two site, double-blind RCT, authors looked at children up to 18 months old with the clinical diagnosis of bronchiolitis who required treatment. Patients received either three doses of racemic albuterol or one dose of racemic epinephrine plus two saline nebulizers. The main outcome measure study was "successful discharge" defined as not requiring additional bronchodilators in the ED and not resulting in admission within 72 hours.

A total of 352 patients were given albuterol and 351 patients epinephrine. A total of 173 patients in the albuterol group and 160 patients in the epinephrine group were successfully discharged (RR = 1.0, 95% CI = 0.92 to 1.26). When authors adjusted for severity, they found a lower risk of admission with the use of nebulized racemic albuterol than with racemic epinephrine.

*continued on page 19*

## The Importance of Membership

*Michael Ybarra*

*President, AAEM/RSA Medical Student Council*

Every time I write a check to pay a bill or swipe my credit card to buy groceries, I am reminded of the fact that I am not really paying for anything; instead, I'm leveraging my future potential and putting off the real due date to a yet-to-be determined time. We all spend money every day, and at this tenuous financial juncture that medical students face, we are forced to make tough decisions. Spending \$20 or \$50 in order to be student members of AAEM/RSA is an investment, but one that pays off in direct and indirect ways. In the end, AAEM is committed to seven core principles. As I grow in my career from an interested medical student to a future resident, the principles become more and more pertinent, and I am glad that before I was aware of the issues our field faces, AAEM was fighting for them.

Over the course of the year, the AAEM/RSA Board and Medical Student Council have thought long and hard to come up with ways to increase the return on your investment. We have expanded EMSelect.org, the best residency application tool on the web, enhanced member communications with the Journal Club Mailer, Advocacy Quick Hits and *Rules of the Road* summaries, increased the size of the EMIG Workshop Starter Kits and brought students together with program directors at meetings across the country to answer your important questions.

The investment pays dividends to you in these direct forms, but your membership dollars play an important role you may not be aware of. Just recently, the AAEM's government affairs worked in a coordinated effort with other medical organizations to ensure that medical students could still qualify for economic hardship deferments of student loans. "College Cost Reduction and Access Act of 2007" went in to effect in October of last year and would have jeopardized our ability to defer student loan repayments during residency. Our advocates on Capitol Hill lobbied for and won an important reversal.

Each year, the Federal Government passes budgets that would decrease physician reimbursement for Medicare services. According to the AMA, 2008 Medicare physician payment rates are about the same as they were in 2001 – and that is better than Congress and the President would have it, despite the fact that they received five pay raises during this same time period. In July, without legislation to stave off a cut, Medicare reimbursements will decrease by approximately 10% and another 5% in January of 2009. Membership alone strengthens our voice to ensure these cuts are not enacted.

AAEM and its Foundation have committed substantial time and resources in what may be pivotal cases in Texas related to the professional control of the practice of emergency medicine. Important legal topics and business practices like restrictive covenants, due process in contract negotiations, patient boarding, tort reform and credentialing (to name a few) are issues that seem far beyond the practice of emergency medicine, particularly to medical students. But avoiding these issues until we are out in practice will allow lawyers, legislators and business executives to make the important decisions that will shape the future of medicine. While we study, our membership and our membership dollars are doing important work.

As new threats and challenges to the field emerge, AAEM will take up the mantle as it has over the last 15 years. So, while spending any amount of money makes light bulbs go off in the back of our heads as medical students, rest assured that your investment means a stronger future for emergency medicine. These are the reasons I know my membership money is an essential investment, and I hope you feel the same. I would also like to encourage you to invite your classmates interested in emergency medicine to join. The more members we have, the stronger the organization's voice. In 2008, we will recognize those schools with an exceptional commitment to AAEM by listing them on our webpage as "Regional Leaders." We want this recognition to underscore the importance of involvement as a medical student and encourage continued growth of our organization.

I appreciate the opportunity to work with such a great team of individuals this year as President of the Medical Student Council. The elected residents and medical students are an impressive group to work with, but I also owe a great debt of gratitude to the assiduous staff of AAEM. The Medical Student Council would particularly like to thank Janet Wilson, Shauna Barnes and Jody Bath for all they have done to help us develop our section. I have yet to meet an individual involved in the organization who is not passionate about emergency medicine and the principles of AAEM. All the best for the next challenge that awaits!

*Resident Journal Review - continued from page 17*

Authors concluded that in children up to 18 months, ED treatment of bronchiolitis with nebulized albuterol led to more ED discharges than nebulized racemic epinephrine. One potential bias against epinephrine was that patients received albuterol closer to disposition decision. While this is the largest study evaluating these medications for bronchiolitis, it does contradict some other studies, so more RCTs need to be done to further evaluate the optimal ED treatment for bronchiolitis.

**Brown L, Christian-Kopp S, Sherwin TS, et al. Adjunctive Atropine is Unnecessary During Ketamine Sedation in Children. Acad Emerg Med 2008; 15:314-318.**

The use of adjunctive atropine is often recommended to mitigate hypersalivation caused by ketamine use in sedation. This prospective observational study evaluated ED pediatric patients receiving sedation with ketamine without adjunctive atropine and studied rates of excessive salivation and the frequency of airway complications.

A total of 947 (86.9%) sedations were performed without adjunctive atropine. 92% of these patients had no salivation, and only 1.3% (12 patients) had salivation scores > 50 mm. There were a total of three episodes of laryngospasm.

This study shows that excessive salivation is relatively uncommon, and the majority of pediatric sedations with ketamine do not require adjunctive atropine. However, this study was not blinded and there exists the possibility that adjunctive atropine may have beneficial effects to decrease hypersalivation. Furthermore, since the study was not blinded, patients with oropharyngeal procedures would be more likely to be excluded as physicians would have been more likely to use adjunctive atropine for these cases.

**Daniel Nishijima is a resident in emergency medicine residency at SUNY Downstate/Kings County.**

**David Wallace is an emergency medicine/internal medicine resident at SUNY Downstate/Kings County.**

**Christopher Doty is the Associate Residency Director of Emergency Medicine and Program Director of EM/IM at SUNY Downstate/Kings County.**

**Amal Mattu is the Program Director for Emergency Medicine and Co-Director of EM/IM at the University of Maryland.**

## The AAEM Emergency Medicine Written Board Review Course

(Preparation for the Qualifying Exam and ConCert Exam)

September 25-28, 2008 • Newark, New Jersey

*Education Committee Update - continued from page 14*

the country. While dressed in full Hawaiian garb and drinking margaritas, those in attendance braved chilly weather and spent most of their time huddled in tight groups under the heat lamps. Prizes went to the best outfit, and an excellent time was had by everyone. I would like to extend a special thanks to John Wagner, Pepid President, for sponsoring the event and Janet Wilson, AAEM/RSA Executive Director, for all her help in the planning process. Overall, the 2008 SA was a successful event for the Education Committee, and we look forward to seeing everyone next year in Phoenix.

With the RSA elections decided, I plan on working with the incoming Education Committee Chair to ensure that the momentum we have generated this year continues. The top priorities for the remainder of my term are to begin planning an expanded second Annual AAEM/RSA Midwest Student Symposium and to start formulating ideas for the 2009 SA resident track. To help with this endeavor, those residents and students interested in planning educational and social activities are encouraged to join the committee and take an active role in shaping future events.

# AAEM Young Physicians Section

## YPS PRESIDENT'S MESSAGE

Marc Haber, MD FAAEM

President, AAEM Young Physicians Section

It is my honor and privilege to serve as president of the AAEM Young Physician Section (YPS). I truly appreciate your support and will work hard to accomplish the goals we have set forward. Having returned (and recovered) from a tour of duty in Afghanistan, I am now well rested and quite motivated to hit the ground running. That said, we have our work cut out for us and much to accomplish this year. Thankfully, the current board is full of likewise motivated and hardworking individuals. This team will work hard to promote and improve YPS. Our primary goal is to improve the value of YPS membership. Here are a few of the current and upcoming projects that are planned for this year.

### THE (UPDATED) RULES OF THE ROAD

YPS Immediate Past President, Dr. David Vega, will continue to lead in this worthy endeavor. This valuable manual will cover subjects from the obvious (getting a job) to the nitty gritty (identifying healthy and unhealthy business practices). Most residencies will only tackle a fraction of these issues, if any. While the majority of the sections for the text have already been assigned, opportunities still exist for YPS members to write a chapter. This is a rare opportunity for national exposure! Feel free to email [info@ypsaaem.org](mailto:info@ypsaaem.org) if this interests you.

### COMMON SENSE

Perhaps you are interested in creative writing. There are also publication opportunities for YPS members in *Common Sense*, which is published bimonthly. Topics are limited only by your imagination and input. There is great opportunity for our members here. Where else could you develop your own bimonthly column with a wide readership?

### MENTORING PROGRAM

This is a program strongly requested by our members. The concept of having a personal career counselor is intriguing and invaluable. This project is currently run by our new Vice President, Michael Epter, and will be tweaked, refined and available to all members of YPS.

### ANNUAL SOCIAL EVENT

Each year during the Scientific Assembly, YPS and RSA host an annual get together. This is free of charge to all members of either RSA or YPS and is a lot of fun. Next year the event will be held in Phoenix and is certain to be a blast.

### LECTURE OPPORTUNITIES

This is an exciting idea at the early stages of development that will need your support. YPS would like to create a lecture tract designed by and for members of YPS. We would like members of YPS to be involved in all stages of the development of this tract. We would also like members of YPS to have the opportunity to provide lectures as well. We foresee this as a possible bully pulpit into the national stage of lecturing.

### CURRICULUM VITAE (CV) ASSISTANCE

This is another value-added idea for YPS members. Residencies typically do not assist in creating a CV for the job hunt. A quality CV and cover letter is a very valuable tool in marketing yourself to your future employer. Professional CV assistance can cost anywhere from \$150 to \$3000 dollars depending on the company and product. We would like to offer this service either free of charge or for a significantly reduced price to all members of YPS and paying members of RSA.

### YOUR IDEAS HERE

The future of YPS is in our hands. It is only limited by our imagination and effort. If you have an idea of what YPS should be or do, let your voice be heard. Don't be shy. Let me know your thoughts.

As you can see, the Young Physician Section is starting off the year running. We have much work to continue from the previous year and some fantastic new projects to introduce. I believe that we must first continue to create and improve the tangible benefits of YPS membership. I truly believe that as we reach this first goal, the success of YPS will be a natural progression. Success begets success.

That said, our membership will increase as we continue to add value, but your colleagues, residents and medical students need to know about our section. So please talk up the section; let people know our benefits and goals. The building of the section is a grass root effort, and we need your recruiting skills.

We have some ambitious goals for YPS. With your continued support and input we will make them happen. Please email [info@ypsaaem.org](mailto:info@ypsaaem.org) with your feedback, both positive and negative. Your input will have a direct effect on the success of our section. Have a wonderful springtime!

# AAEM Young Physicians Section

## Ask the Expert

Joel Schofer, MD FAAEM  
 LCDR MC USN, Naval Hospital Okinawa

“Ask the Expert” is a *Common Sense* feature where subject matter experts provide answers to questions provided by AAEM & YPS members. This edition features Dr. Robert McNamara, a Past President of AAEM and the Chairman of the Temple University Department of Emergency Medicine.

**Question:** What advice would you give to a young emergency physician?

- Answer:**
1. Always try to see and speak to each member of your family once per day.
  2. Never tell your significant other that they don't know how hard you work. They do.
  3. Bring healthy food to work. Routine ordering out for food wastes time and money, kills your waistline and kills you.
  4. Try to tell each patient, “I am sorry you had to wait so long.” You will win them over.
  5. Think about asking your patient, “what do you think might be wrong?” Or, “what are you worried about?” You will be amazed at what they are fearful of and may be able to help allay those fears.
  6. Appreciate that someday your child might be a “gomer.” How would you want them treated by their ED physician?
  7. Realize that every “punk” you see was just like you when they were two years old - happy and carefree, but they didn't have your parents.
  8. Remember that an EM career is not a cakewalk; the vast majority of adults would be happy and proud to have your job making the kind of money you do while helping people.
  9. Invest in your practice by getting involved in the greater affairs of the hospital and medical staff.

If you have a question that you would like to have answered by an expert in a future issue of *Common Sense*, please send it to [jschofer@gmail.com](mailto:jschofer@gmail.com).
